PRODUCT DESCRIPTION

BigFarmNet Export is a tool that is part of the BigFarmNet PC management system. It lets the user export data from their BigFarmNet systems into CSV files or databases. The data can be imported into BigFarmNet EPM (Enterprise Performance Management), Excel or be used in business systems.

BigFarmNet Export uses WebAccess to retrieve data from farms or enterprises. Therefore a WebAccess license is required for BigFarmNet Manager at each farm.

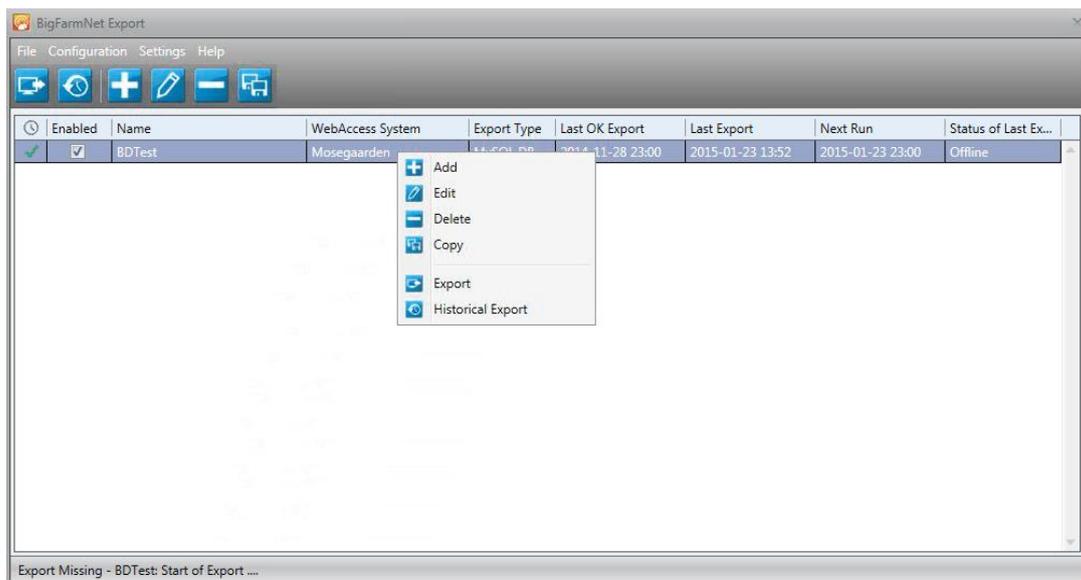

Figure 1: Example of BigFarmNet Export with a list of different WebAccess configurations

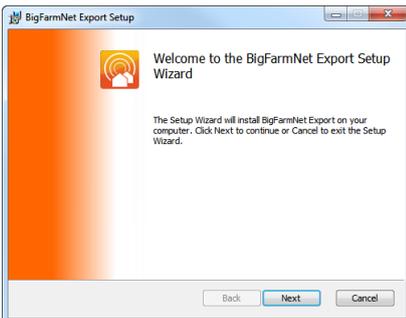

USER GUIDE

1 Installing BigFarmNet Export on a PC

Install the program on all the PCs, from where you want to export data.

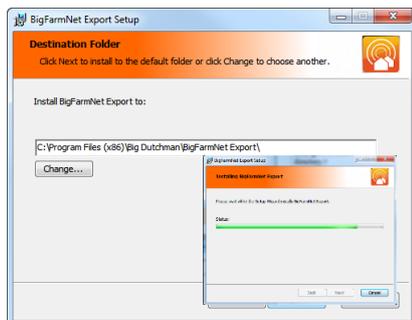

- 1) Install the BigFarmNet Export program on a PC by double clicking on Setup.exe.

- 2) Click **Next**.

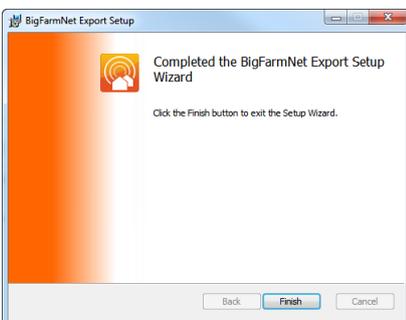

- 3) Read the licence agreement terms and click **I accept the terms...** and **Next** to accept them.

The installation file saves the program in the folder C:\Program Files\ Big Dutchman\BigFarmNet Export.

If you prefer a different file location, please click **Change** to access the new location in the directory.

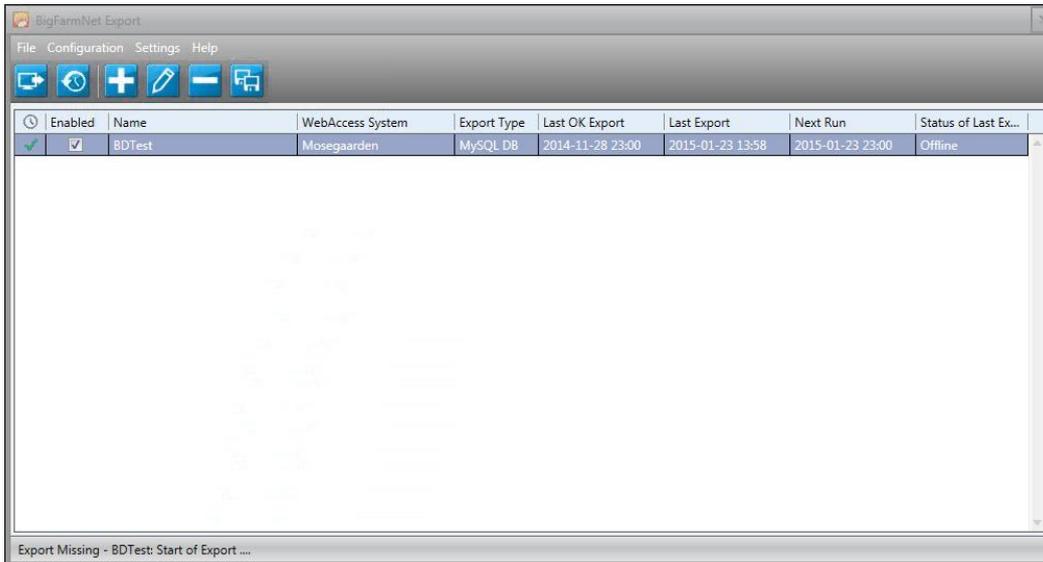

- 4) Click **Next**.

- 5) Click **Finish** when the installation is completed.

2 BigFarmNet Export User Interface

Open the BigFarmNet Export program.

In the BigFarmNet Export window the user can manage the data configurations, that are used for exporting data from the BigFarmNet system to other systems.

All configurations are listed with an indication of time and status for the exported data. The scheduled automatic export can be disabled by removing the marker from the checkbox.

Icon/Menu	Description
The Configuration menu – or right-click a configuration.	
	Add Add a new configuration.
	Edit Edit an existing configuration.
	Delete Remove an existing configuration.
	Copy Copy a configuration.
	Export Export data to a file. A file is saved to the path in the configuration or to a path selected by user.
	Historical Export Export of historical data for a selected interval.
	Close Close the BigFarmNet Export window and minimize in the taskbar tray. Automatic data export will still be carried out. To resize the BigFarmNet Export window, click the icon on the taskbar tray.
	Exit The File menu. Exit the BigFarmNet Export program. The data export is running as a Windows background service and will ensure that data are still exported according to the configurations made in BigFarmNet Export.
	MySQL DB The Settings menu. Parameters for connecting to the database.
	SQL Server The Settings menu. Parameters for connecting to the database.
	Help The Help menu. Open a document with links to program documentation.
	About The Help menu. Show company copy right information and BigFarmNet Export version number.

3 Setting up an Export Configuration

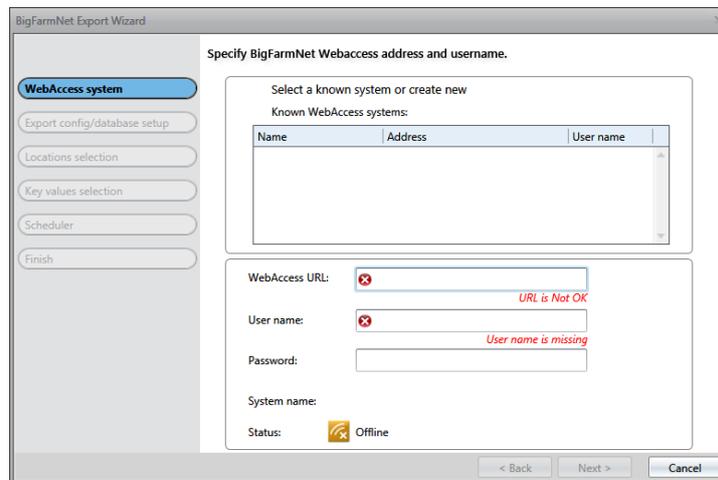

Click  **Add** or  **Edit** in the top tool bar.

This opens the BigFarmNet Export Wizard, that will guide you through the setup of the configuration.

3.1 WebAccess Address

The first step in setting up a new configuration is selecting or typing an address of a running BigFarmNet system with WebAccess enabled.

An address for a new WebAccess system must be entered manually. If the WebAccess system is already used for an existing configuration the system can be picked from a list of known systems.

3.1.1 New System - Manual Setup

WebAccess URL:	<input type="text" value="http://www.skoBD n/poultrydemo"/>
User name:	<input type="text" value="admin"/>
Password:	<input type="password"/>
System name:	Farm
Status:	 Online

Enter WebAccess URL, user name and password.

Standard user name: **guest**

The user name and password must correspond to a user profile in the BigFarmNet Manager User Management.

Status will change to **Online** when BigFarmNet Export has successfully connected to the WebAccess connection.

The configuration is saved to the list of known systems when **Next** is clicked.

3.1.2 Known System – Select Setup

Known WebAccess systems:

Name	Address	User name
Mosegaarden	http://mosegaarden.dyndns.org:8...	guest

Doubleclick on a known system to select it from the list and copy it to the manual setup.

Status will change to **Online** when BigFarmNet Export has successfully connected to the WebAccess connection.

Known WebAccess systems:

Name	Address	User name
Mosegaarden	http://mosegaarden.dyndns.org:8...	guest

 Delete

Rightclick on a known system to access a delete option.

3.2 Exporting Data to CSV File or Database

After configuration of the WebAccess system, select how to store data, either in CSV File, MySQL database or SQL Server:

For description of exporting to a CSV file see chapter 3.2.1.

For description of exporting to a database see chapter 3.2.2.

3.2.1 Exporting Data for a CSV File

When data is to be exported to a .csv file format the following settings are needed:

- Configuration name
- Location
- Key values
- Time schedule

Enter the settings and click **Next**.

3.2.1.1 Configuration Name

The next step is select the type of file for the exported data (CSV) and to name the configuration.

Create new file when exporting

A new CSV file will be created at every export.

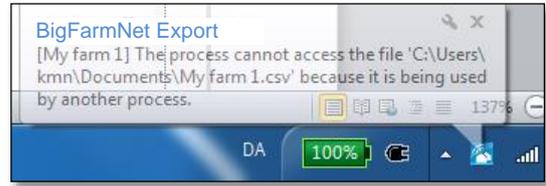

Append to the same file when exporting

The data is appended to the existing export file.

06-12-2012 14:02	03d0f2fd-e503-4784-b242-da0a39c9cdec/4	Farm-House 5	Batch started	36894	1,63
06-12-2012 14:02	03d0f2fd-e503-4784-b242-da0a39c9cdec/5	Farm-House 6	Batch started	37880	1,67

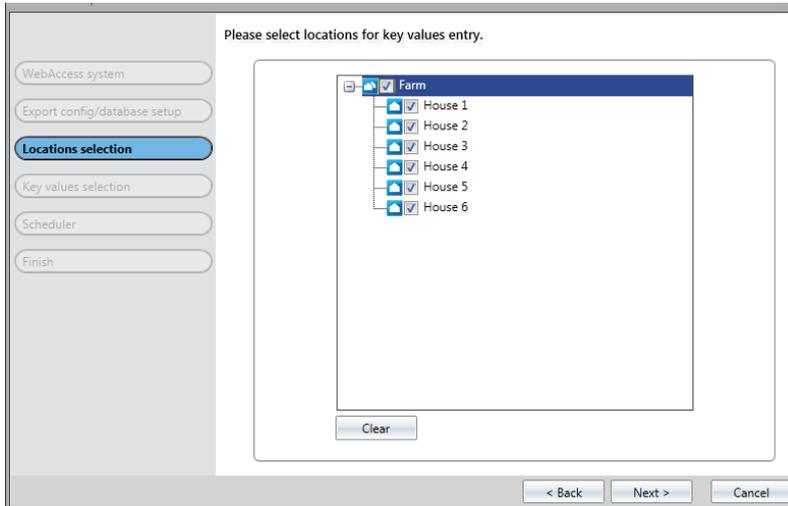

The CSV file may be opened using MS Excel or Notepad.

Please note that if the export file is opened BigFarmNet Export cannot write data to it.

3.2.1.2 Location

The next step is to select the locations (Enterprise, Farm, House, Section or Pen) from which data is to be exported. The locations are displayed in a tree view showing the hierarchy of the location structure.

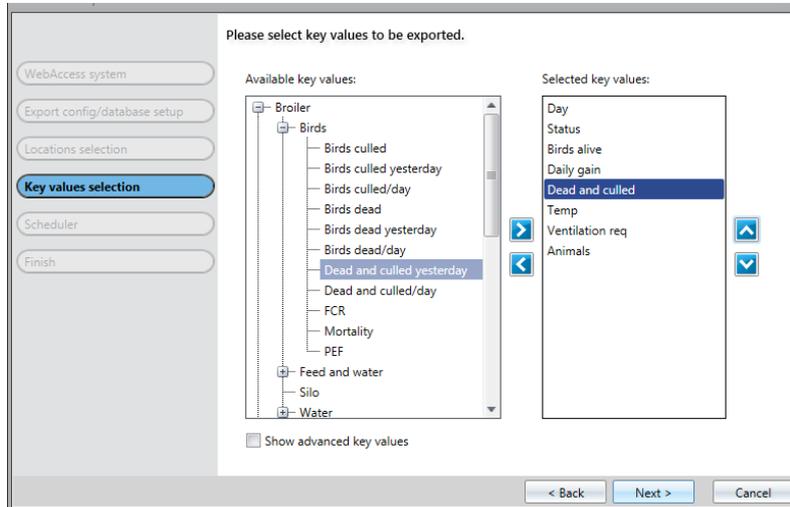

Click a checkbox to select to export data from the location.

3.2.1.3 Selection of Key Values

The next step is to select the data, called key values, to be exported. The available key values are provided by BigFarmNet Manager.

The number of available key values can be increased by checking the **Show advanced key values-**checkbox.

Select/deselect key value

Click  to select a key value.

Click  to deselect a key value.

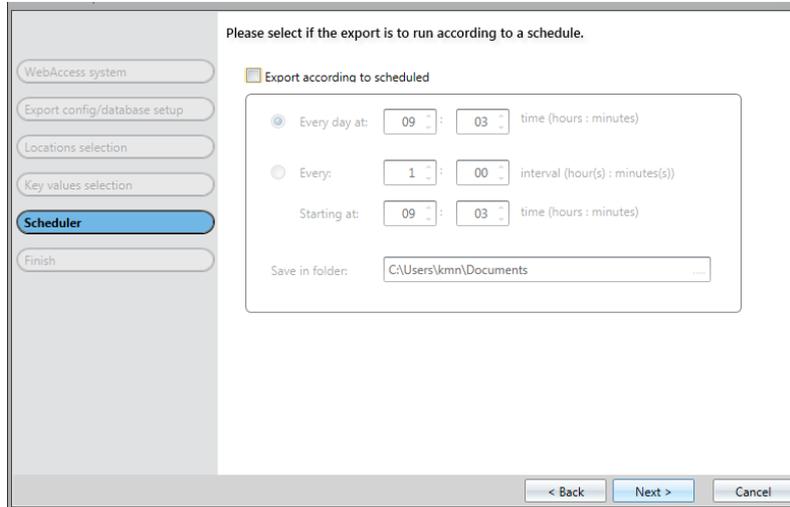

Change order of key values

Click   to change the order of the key values in the export file.

3.2.1.4 Schedule for Data Export

The data export can either be started manually at any given time – by choosing a configuration in the list and clicking  **Run** – or set up to run at a given interval.

If the export is to run automatically the next step is to setup a schedule for the export.

Run scheduled

Click the checkbox to active automatic data export.

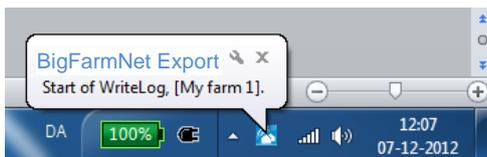

Every day at

The automatic export can be set as running daily at a given time or at a given interval (minimum 2 min. and maximum 23 hours and 59 min.).

Every

Save in folder

Select a path for saving the export file.

A pop-up indicates when data is automatically exported the first time.

3.2.2 Exporting Data for SQL Database

When exporting to a database all available key values from all farms are exported daily at a given time of day.

After setting up the WebAccess address (see section 3.1), the first step is to install a database for the exported data. Big Dutchman recommends using a MySQL DB.

For more details on setting up the database please see to *BigFarmNet EPM Technical Manual*.

3.2.2.1 Setting Parameters for the Database Connection

The next step is to set up the connection to the database using the **Database** function in the **Settings** menu.

Set the database parameters supplied by the system administrator.

MySQL database parameters.

The default values are:

Port	3306
Username	root
Password	1234

3.2.2.2 Configuration for SQL Database

The next step is to select the type of database installed and to name the configuration.

File/Database format Select to use a MySQL database or a SQL Server.

Configuration name Name the configuration indicating the location.

Database name Name the database. The same database can be used for several different configurations from different farms.

Don't use spacing in the database name.

Time zone Select the time zone of the server running BigFarmNet Export.

3.2.3 Completing Configuration Setup

The final step is to check if the settings are as required.

To complete, press [Finish] button to save this configuration.

WebAccess system
Export config/database setup
Locations selection
Key values selection
Scheduler
Finish

Configuration name: My farm 4
System name: DemoFarm
Export scheduled: Yes
Every day at 9:03 hours.
Save file at: C:\Users\kmm\Documents

< Back Finish Cancel

- | | |
|---------------|------------------------------------------------------------------------------------------------------------------|
| Finish | Click Finish to save the configuration. It will be available in the list in the BigFarmNet Export window. |
| Cancel | Click Cancel to close the wizard without saving the configuration. |
-

4 Minimizing the Program

Clicking the X in the upper right corner will only minimize the program to the task bar tray area.

To resize the program click the Show hidden icons button and choose the BigFarmNet icon.

TECHNICAL DATA

PC minimum requirements for operating BigFarmNet Export

Processor:	Dual Core CPU
RAM:	4 GB
Hard disk	5 GB free space
Font size on PC	Standard 96 dpi
Network interface card (Ethernet):	The PC is to be connected to house computers and BigFarmNet WebLink via LAN
Operating system:	Windows 7 32bit og 64bit, Windows 8, Windows 10
Database for Export	MySQL db, SQL server

Big Dutchman.
